

Directory Structure Folders

Posted by deanstacy - 2008/10/15 14:10

I am having problems with my downloading. When I download, extract and run installation everything seems to go fine. However after the download I look on my c:drive and the folders are not there like the manual indicates they should be. Can someone please help me with this??

Hi Dean,

There are two downloads you need before you can run AGWA. The file you've downloaded is the installer for the program, so you still need the Datafiles download. Extract that zip file in your AGWA2 home directory (the one you set via the AGWA2 toolbar).
